

We're happy to announce, Code Like a Girl is coming back in January!

We're kicking off our first session with our Scratch and Scratch Advanced courses!

This session will focus on how to build and design video games, create your own sprites, and challenge your imagination and creativity with the power of Scratch! For our returners, we have a whole new advanced curriculum that will test your Scratch knowledge and problem solving skills! If you think you know everything there is to know about Scratch, think again!

Why is Code Like a Girl so important?

Middle School is traditionally when the most girls drop out of computer science. That's why it is so important to encourage and excite girls of this particular pre-middle school age group. We believe that the answer to the gender gap starts with breaking the societal stereotypes placed on girls while introducing them to a new way to code. Our diverse array of topics keep the girls interested and engaged. In addition, we spend time every week discussing girl-driven topics, promoting self-confidence, and cultivating individuality!

Registration is open NOW! Space is limited.

Classes run Mondays, January 22nd - March 19th
